

MULTI-CHANNEL CONTAINER

ABSTRACT

SUB
a' The present invention comprises of a multi-channel single-tube sealed container and applicator that defines multiple channels within its body that may contain different substances in each channel and that is sealed on both ends. A score is formed at a predetermined distance from each sealed end of the multi-channel single-tube sealed container and applicator such that when the multi-channel single-tube sealed container and applicator is bent it will break open at the score discharging the substances in the channels.

The present invention is a multi-channel single-tube sealed container and applicator that is easy to package, convenient, easy to use, easy to transport, sanitary, economical, and self-contained. The present invention is not only a container but can also be used as the applicator. Furthermore, the present invention eliminates the tedious task of measuring the proper proportion of the substances required for application.
